

EE 4374
Programming Assignment #1
Due February 6, 2023

Write a program that creates two processes to execute the following two programs ***concurrently*** with command line arguments:

1. "uname -a"
2. "echo Hello there"

and then waits for these two processes to complete before creating a process to execute "ls -l" and immediately printing "Goodbye!" and exiting; not waiting for that last process to complete.

Your C source file should be named with your last name and the number 1: e.g., mcgarry1.c. You will demonstrate your program and explain the code to the instructor.

Grading rubric:

Submission	40
Process creation	40
Process coordination	20
